**Loci Controls, Inc. Accelerates Growth with Announcement of Second Montauk Energy Service Agreement**

**(Fall River, MA)** May 20, 2020 – Peter Quigley, chairman and CEO of Loci Controls, Inc. announced today the company’s second service agreement with leading renewable natural gas (“RNG”) developer and operator Montauk Energy. The new agreement expands Loci’s Automated Landfill Gas Collection services to a second Landfill Gas to High BTU project

“The system installed at these landfills will improve overall gas collection operations, and increase revenues and profitability, while also providing significant safety and environmental benefits,” said Quigley. “From our first installation in the RNG market in 2017, our goal has been to support our RNG and landfill customers operations, by improving overall gas collection system operations.”

“The choice of expanding a LOCI install to our 2<sup>nd</sup> site was an easy decision. We’ve seen very positive results from the initial install and we are confident and excited that the same will continue with this second site. I think it’s important for anyone considering Loci that the increase in LFG extraction is not only from the automation, but it also frees up your field personnel to focus on other areas of the Gas Collection and Control System (GCCS). The net result is improvement in LFG extraction and overall GCCS operations,” commented Marshall Morris, P.E. Manager - Fuel Supply and Delivery Systems at Montauk Energy. “Loci staff works seamlessly with the Montauk team to help ensure everyone is on the same page. Open and honest communication is paramount when undertaking a successful process improvement, we have enjoyed this working with Loci.”

Loci’s unique Automated Landfill Gas Collection system includes real-time monitoring, measurement and control of landfill gas composition, pressure, temperature, and flow. Loci Controls is installed at approximately 140 collection wells at the two landfill sites, representing over 80% of the aggregate collection, and provides 24/7/365 real-time data, and automated control and support of these RNG projects. Automated landfill gas collection results in increased gas collection system efficiency, increased revenue and profitability for our partners, and increased productivity for on site operating personnel.
